

LANDON **MORGAN**

SOFTWARE DEVELOPER

CAREER SUMMARY

My professional background is primarily in video production, live television, and entertainment. I've worked for record labels, production companies, and a media conglomerate (AOL). I approach problems from a technical perspective, to break the larger problems into smaller ones. Working as a team player, I strive to execute the most efficient and effective solutions available.

I proactively sought code-centered side hustles (hobbies) over the years, including nashvillePA.com (2007-2015) to staff production assistants in Nashville, TN, and holyvintage.com (2010-2013), a site that managed an inventory of vintage t-shirts through hard-coded HTML. <--yikes!

In 2019 I became a full-time Software Developer. A comprehensive look at previous employment can be found on my resume, available on my website, below.

COMMISSIONER MORDAN

Front-End Capstone Project | APRIL 2020

Having previously worked in live TV entertainment and video content creation for artists, I know clients need video projects, and provide certain

details. I created the web application, 'Commisioner Mordan' using React.js. With this app, a user can track info related to the commissioning of artistrelated projects. A user can create, read, update and delete artist entities, video project entities, connect them, and add social or reference URLs. Link to the project, below:

PYTHON/DJANGO PROJECT TBD

Back-End Capstone Project | JUNE 2020

Here is a bunch of text describing my back-end project. It is so cool, you're gonna love it. Wow, it really does that? here is a bunch of text describing

my back-end project. It is so cool, you're gonna love it. Wow, it really does that? here is a bunch of text describing my back-end project. It is so cool, you're gonna love it. Wow, it really does that? here is a bunch of text describing my back-end project. It is so cool, you're gonna love it. Wow, it really does describing my back-end project. It is so cool, you're gonna love it. Wow, it really does that? here is a bunch of text describing my back-end project. It is so cool, you're gonna love it. Wow, it really does that?
